

## IPv4 Header

Version	Protocol	Fragment Offset	IP Flags
Version of IP Protocol. 4 and 6 are valid. This diagram represents version 4 structure only.	IP Protocol ID. Including (but not limited to): 1 ICMP 17 UDP 57 SKIP 2 IGMP 47 GRE 88 EIGRP 6 TCP 50 ESP 89 OSPF 9 IGRP 51 AH 115 L2TP	Fragment offset from start of IP datagram. Measured in 8 byte (2 words, 64 bits) increments. If IP datagram is fragmented, fragment size (Total Length) must be a multiple of 8 bytes.	x (Don't Fragment) D (More Fragments) M (More Fragments follow)
Header Length	Total Length	Header Checksum	RFC 791
Number of 32-bit words in IP header, minimum value of 5. Multiply by 4 to get byte count.	Total length of IP datagram, or IP fragment if fragmented. Measured in Bytes.	Checksum of entire IP header	Please refer to RFC 791 for the complete Internet Protocol (IP) Specification.

## IPv6 Header

Version	Payload Length	Next Header	Hop Limit
Version of IP Protocol. 4 and 6 are valid. This diagram represents version 6 structure only.	16-bit unsigned integer. Length of the IPv6 payload, i.e., the rest of the packet following this IPv6 header, in octets. Any extension headers are considered part of the payload.	8-bit selector. Identifies the type of header immediately following the IPv6 header. Uses the same values as the IPv4 Protocol field.	8-bit unsigned integer. Decrement by 1 by each node that forwards the packet. The packet is discarded if Hop Limit is decremented to zero.
Traffic Class	Source Address	Destination Address	RFC 2460
8 bit traffic class field.	128-bit address of the intended recipient of the packet (possibly not the ultimate recipient, if a Routing header is present).	128-bit address of the originator of the packet.	Please refer to RFC 2460 for the complete Internet Protocol version 6 (IPv6) Specification.
Flow Label			
20 bit flow label.

# UDP header

Checksum	RFC 768
Checksum of entire UDP segment and pseudo header (parts of IP header)	Please refer to RFC 768 for the complete User Datagram Protocol (UDP) Specification.

# ICMP header

ICMP Message Types		Checksum
Type Code/Name	Type Code/Name	Type Code/Name
0 Echo Reply	3 Destination Unreachable (continued)	11 Time Exceeded
3 Destination Unreachable	12 Host Unreachable for TOS	0 TTL Exceeded
0 Net Unreachable	13 Communication Administratively Prohibited	1 Fragment Reassembly Time Exceeded
1 Host Unreachable	4 Source Quench	12 Parameter Problem
2 Protocol Unreachable	5 Redirect	0 Pointer Problem
3 Port Unreachable	0 Redirect Datagram for the Network	1 Missing a Required Operand
4 Fragmentation required, and DF set	1 Redirect Datagram for the Host	2 Bad Length
5 Source Route Failed	2 Redirect Datagram for the TOS & Network	13 Timestamp
6 Destination Network Unknown	3 Redirect Datagram for the TOS & Host	14 Timestamp Reply
7 Destination Host Unknown	8 Echo	15 Information Request
8 Source Host Isolated	9 Router Advertisement	16 Information Reply
9 Network Administratively Prohibited	10 Router Selection	17 Address Mask Request
10 Host Administratively Prohibited		18 Address Mask Reply
11 Network Unreachable for TOS		30 Traceroute

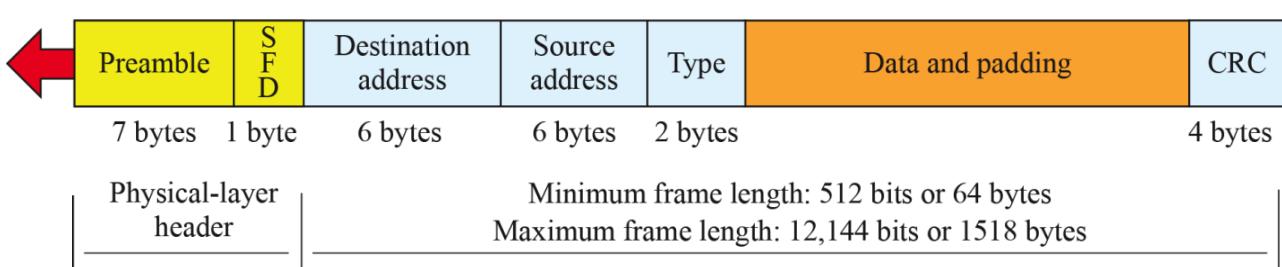

Checksum of ICMP header  
RFC 792

Please refer to RFC 792 for the Internet Control Message protocol (ICMP) specification.

# Ethernet header

Minimum payload length: 46 bytes

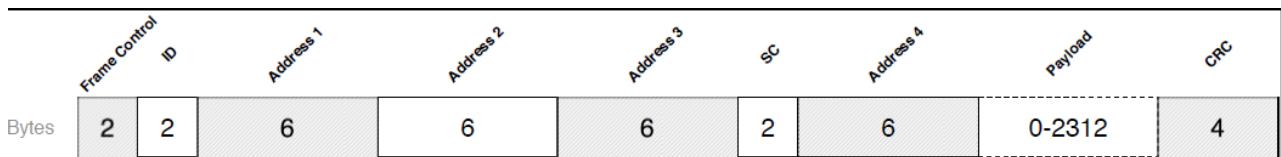

Maximum payload length: 1500 bytes

## The TYPE field

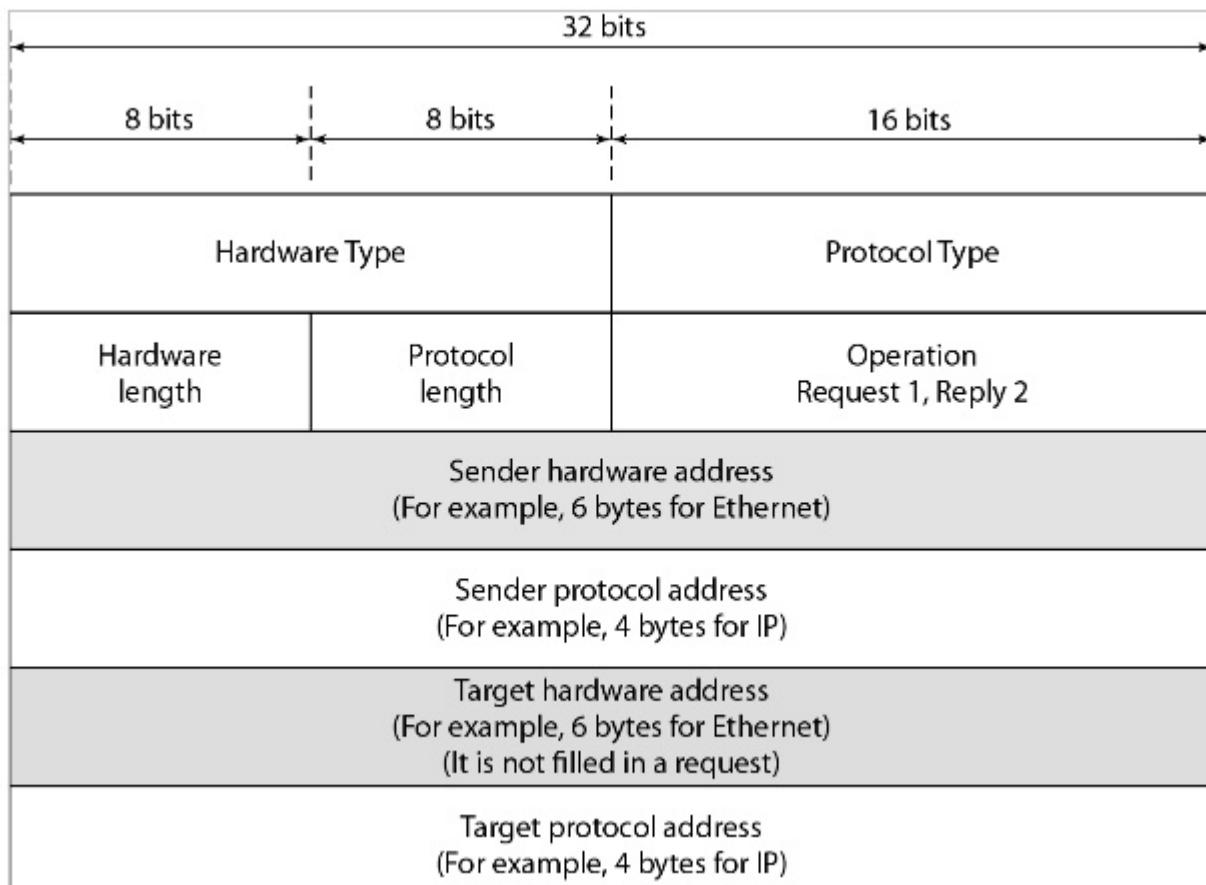

CODE (HEXADECIMAL)	MEANS
0800	IPv4
0806	ARP
86dd	IPv6

# IEEE 802.11 header

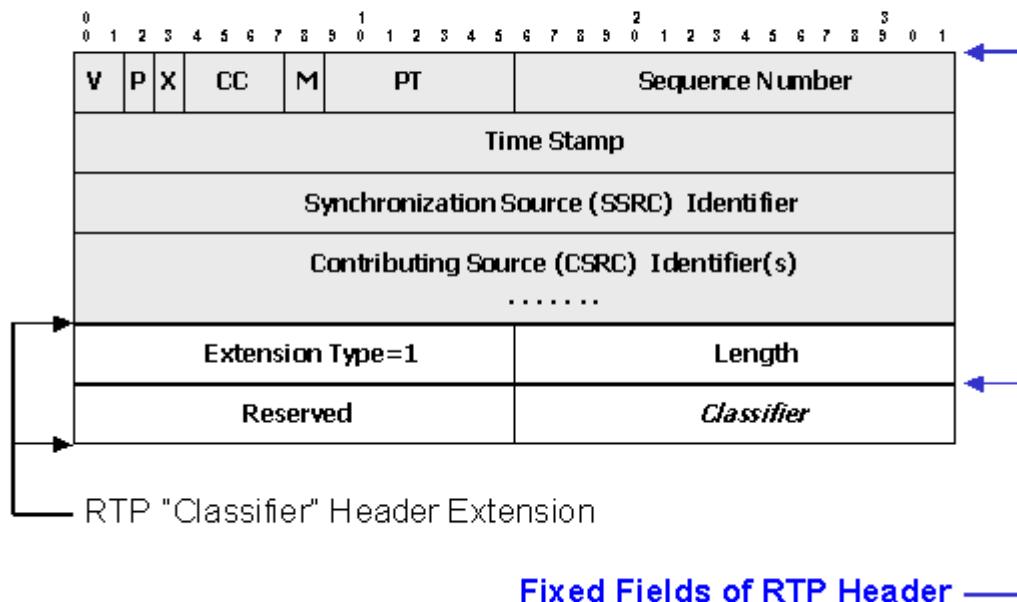

SC = Sequence control

# ARP header

# RTP Header & Extension

## RTCP Header
