## Maximum datagram size

2012-10-01

---

---

---

---

---

---

---

---

---

---

## Fragmentation

Needed when IP datagram size > MTU

IPv4

- ◆ Performed by the router meeting the problem

IPv6

- ◆ Performed by the source router only

Defragmentation by destination host

## Data link control protocols

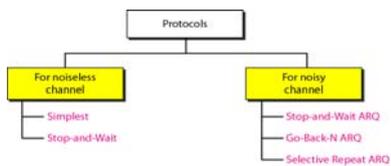

### Framing

### Flow control

- ◆ Send data
- ◆ Wait for ACK

### Error control

- ◆ Detect error
- ◆ Retransmit

Inte alltid att båda  
(flödeskontroll, felhantering)  
finns i länklagret!

2011-09-26

## Go-Back-N?

- Viktigt inför nästa del och TCP (ETSF10)
- Föreläst i repetitionsföreläsningen
- Kommer på övningen

18

---

---

---

---

---

---

---

---

## Routing

- Konsten att bygga least-cost trees
  - Från sändare till mottagare
  - Från varje nod till varje annan nod
- Tre principer
  - Distance Vector
  - Link State
  - Path Vector
    - Policy-based routing

19

---

---

---

---

---

---

---

---

## Distance vector routing

All best known paths **shared to neighbours**

- ◆ Periodically
- ◆ Upon any change

Routing tables **updated** for

- ◆ New entries
- ◆ Cost changes

”Global knowledge shared locally”

---

---

---

---

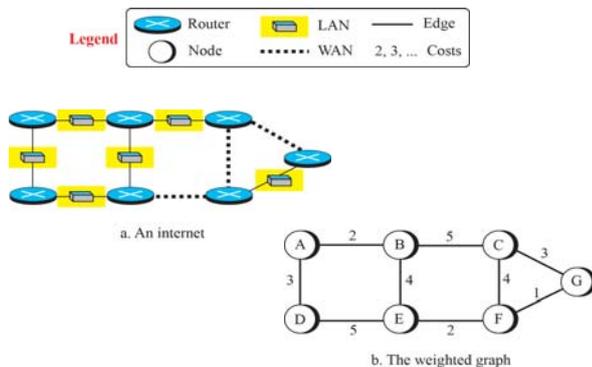

---

---

---

---

**Figure 20.1:** An internet and its graphical representation

20.21

---

---

---

---

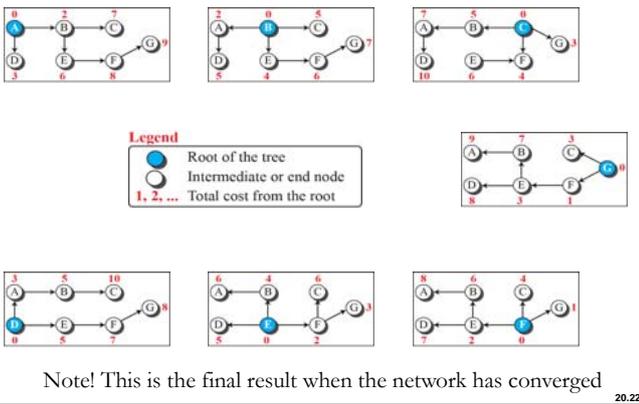

---

---

---

---

Figure 20.2: Least-cost trees for nodes in the internet of Figure 4.56

---

---

---

---

---

---

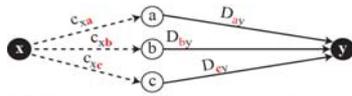

---

---

---

---

Figure 20.3: Graphical idea behind Bellman-Ford equation

a. General case with three intermediate nodes

$$D_{xy} = \min\{(c_{xa} + D_{ay}), (c_{xb} + D_{by}), (c_{xc} + D_{cy}) \dots\}$$

b. Updating a path with a new route

$$D_{xy} = \min\{D_{xy}, (c_{xz} + D_{zy})\}$$

---

---

---

---

---

---

---

---

---

---

## Updating algorithm (Bellman-Ford)

```

if (advertised destination not in table)
{
    add new entry // rule #1
}
else if (adv. next hop = next hop in table)
{
    update cost // rule #2
}
else if (adv. cost < cost in table)
{
    replace old entry // rule #3
}
    
```

---

Figure 20.4: The distance vector corresponding to a tree

a. Tree for node A

A	
A	0
B	2
C	7
D	3
E	6
F	8
G	9

b. Distance vector for node A

20.25

---

---

---

---

---

---

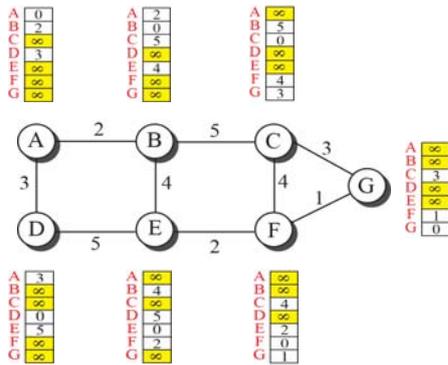

---

---

---

---

Figure 20.5: The first distance vector for an internet

20.26

---

---

---

---

---

---

---

---

---

---

Figure 20.6: Updating distance vectors

New B		Old B		A	
A	2	A	2	A	0
B	0	B	0	B	2
C	5	C	5	C	∞
D	5	D	∞	D	3
E	4	E	4	E	∞
F	∞	F	∞	F	∞
G	∞	G	∞	G	∞

$B[i] = \min(B[i], 2 + A[i])$

a. First event: B receives a copy of A's vector.

Note:  
X[i]: the whole vector

New B		Old B		E	
A	2	A	2	A	∞
B	0	B	0	B	4
C	5	C	5	C	∞
D	5	D	5	D	5
E	4	E	4	E	0
F	6	F	∞	F	2
G	∞	G	∞	G	∞

$B[i] = \min(B[i], 4 + E[i])$

b. Second event: B receives a copy of E's vector.

- Periodiska uppdateringar!?
- Problem med länkar och noder som försvinner.

20.27

---

---

---

---

---

---

---

---

---

---

## Mer om distance vector

I ETSF10:

- Count to infinity
- Two, three node instability
- Split Horizon
- Poison Reverse
- Routingprotokoll RIP

28

---

---

---

---

---

---

---

---

## Link state routing

**Local topology** info **flooded** globally

- ◆ Periodically (very seldom in practise)
- ◆ Upon any change

Create database with link states in each node

Routing tables updated for

- ◆ New entries
- ◆ Cost changes

”Local knowledge shared globally”

29  
2011-10-03

---

---

---

---

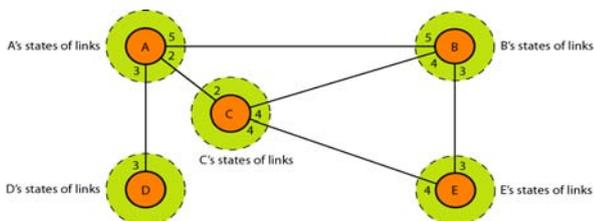

---

---

---

---

## Initial link state knowledge

30  
2011-10-03

---

---

---

---

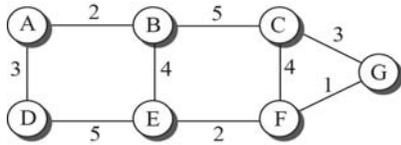

---

---

---

---

Figure 20.8: Example of a link-state database

a. The weighted graph

	A	B	C	D	E	F	G
A	0	2	∞	3	∞	∞	∞
B	2	0	5	∞	4	∞	∞
C	∞	5	0	∞	∞	4	3
D	3	∞	∞	0	5	∞	∞
E	∞	4	∞	5	0	2	∞
F	∞	∞	4	∞	2	0	1
G	∞	∞	3	∞	∞	1	0

b. Link state database

---

---

---

---

---

---

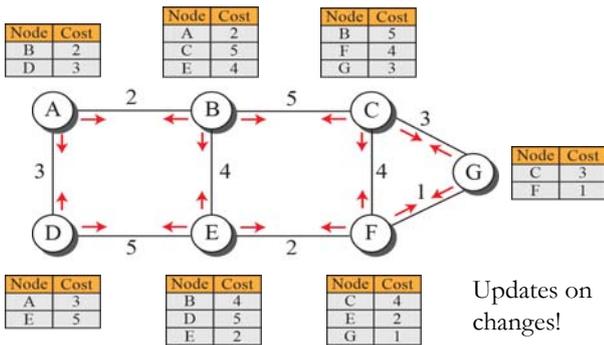

---

## Tree generation algorithm (Dijkstra)

```

put yourself to tentative list
while tentative list not empty
{
    pick node which can be reached
        with least cumulative cost
    add it to your tree*
    put its neighbours to tentative list**
        with cumulative costs to reach them
}

```

\* (a. k. a. permanent list)  
 \*\* (if not already there with lower cost)

33

---

---

---

---

---

---

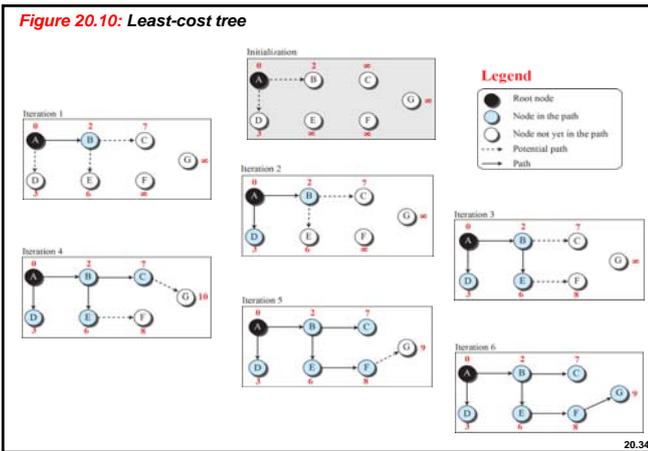

---

---

---

---

Figure 20.10: Least-cost tree

---

---

---

---

---

---

---

---

### Mer om link state

I ETSF10:

- Routingprotokoll OSPF
- Konceptet Areor eller hur man minskar flooding

---

---

---

---

---

---

---

---

### Path Vector Routing

- Policy Based Routing
- Select *best path* of multiple paths
- Similar to Distance Vector
- Add path vector for each destination
- Add only paths that passes through accepted nodes
- Do not add paths where own node is element
- Path Vector length is only/major discriminator

---

---

---

---

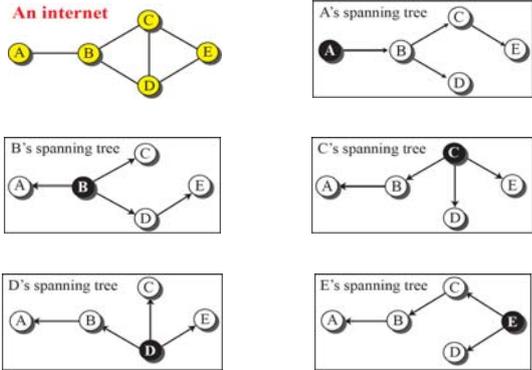

---

---

---

---
