

Special instructions for home exam in

EDIN01 CRYPTOGRAPHY

Dept. of Electrical and
Information Technology
Lund University

14.00 on August 19, 2021, until 14.00 on August 20.

- Hand-out of exam: at 14.00 on August 19 the exam will be available on the course web page for download. Use your own white sheets for writing solutions. Alternatively, a copy of the exam and empty sheets of paper can be picked up in boxes outside EIT (third floor in E-building, north stairwell) from 12.00.
- Hand-in of exam: No later than 14.00 on August 20 you can hand in your exam solutions at the department (third floor in E-building, hand-in boxes in north stairwell). Alternatively, you can hand in by scanning your solutions and email them to the examiner on email address: thomas@eit.lth.se no later than 14.00! But you must then also send the original solutions and this first page with original signature by regular mail to the address below.¹ The exam will not be corrected until this is received.
- Exam contents: In the home exam there will be problems similar to a standard exam. The grading will require 25/35/45 points for grade 3/4/5, respectively, out of a total of 50. To get grade 5 you additionally need to be approved on an oral exam.
- Sign-up: You need to have signed up to take the exam.
- Help and assistance: You are allowed to use any written information you have access to and you are allowed to use computers and programming for computations. **You are not allowed to get assistance in any way from any other person to help you with your solutions.** This includes asking people to post information on forums, etc. It also includes assisting any other person doing the exam. To assure this, you have to formally sign such a statement.² **This first page with original signature must be handed in together with your solutions!**

Name:

Personal Code Number:

I solemnly declare that I have not used help from any other person in the process of preparing the exam solutions that I now hand in.

Signature:

Hand in this page with original signature!

¹Address: Thomas Johansson, Dept. of EIT, Box 118, 22100 Lund, Sweden

²Overstepping the rules of help and assistance may lead to suspension from the university.

Final exam in CRYPTOGRAPHY

August 25, 2020,

- You are allowed to use a calculator.
- Each solution should be written on a *separate sheet of paper*.
- You must *clearly* show the line of reasoning.
- If any data is lacking, make reasonable assumptions.

Good luck!

Problem 1

Alice wants to encrypt some English text. She decides that she wants extra protection by encrypting the text first by one cipher and then by a second cipher. If E_K denotes the encryption by the first cipher and $E_{K'}$ denotes the encryption by the second cipher, the encryption process would be as follows.

A sequence of message symbols $M_1, M_2, \dots, M_n$ is encrypted to a sequence of ciphertext symbols $C_1, C_2, \dots, C_n$ by

$$C_i = E_{K'}(E_K(M_i)), \quad \forall i, 1 \leq i \leq n.$$

- a) Determine the unicity distance if the first cipher is a simple substitution cipher and the second cipher is the identity map ($E_{K'}(M_i) = M_i$).
- b) Determine the unicity distance if the first cipher is a simple substitution cipher and the second cipher is a Caesar cipher.

Hint: Two keys are different if they represent different mappings from plaintext symbol to ciphertext symbol.

- c) If we want to make the unicity distance for the system above even larger than in **a)** and **b)**, suggest what we could do.

(10 points)

Problem 2

- b) Find the shortest linear feedback shift register that generates the sequence

$$s = [0, 0, 0, 1, 1]^\infty$$

over $\mathbb{F}_2$.

- a) Find the shortest linear feedback shift register that generates the sequence

$$s = (1, 0, 1, 2\alpha, 2\alpha, \alpha + 1, 2)$$

over $\mathbb{F}_{3^2}$, generated by $p(x) = x^2 + x + 2$ and $p(\alpha) = 0$.

(10 points)

Problem 3

- a) A Shamir threshold scheme for $n = 5$ participants with threshold $k = 3$ using the public values $x_i = i$ is assumed. All values are assumed to be in $\mathbb{F}_{101}$. Participants 1, 2, and 3 hold the private shares $y_1 = 40$, $y_2 = 50$, and $y_3 = 60$. Help them to reconstruct the secret.

- b) In an authentication system the source message S and the key E are given as,

$$S = (s_1, s_2), \quad E = (e_1, e_2),$$

where

$$s_1, s_2, e_1, e_2 \in \mathbb{F}_3.$$

The coded message M is a 3-tuple generated by

$$M = (s_1, s_2, t),$$

where

$$t = e_1 + s_1 e_1 + s_2 e_2.$$

Find the value of P_I and P_S . Recall that P_S is calculated as

$$P_S = \max_{M, M': M' \neq M} P(M' \text{ valid} | M \text{ observed}).$$

(10 points)

Problem 4

Factor the RSA number $n = 44384521$ using the basic form of the Quadratic Sieve algorithm you learned in the first project. The square of the following numbers are B -smooth for some very small B ,

$$1883840, 6521874, 13519124, 16006155.$$

Note that factoring n by trial division is not allowed.

(10 points)

Problem 5

Consider the polynomial $p(x) = 1 + x^3 + x^5$.

- a) Show that $p(x)$ is irreducible ("primpolynom") over $\mathbb{F}_2$.
- b) Determine whether $p(x)$ is primitive ("primitivt polynom") over $\mathbb{F}_2$ or not.
- c) Determine whether $p(x)$ is irreducible ("primpolynom") over $\mathbb{F}_{2^5}$ or not.

(10 points)
