

## Who am I?

- Anders J Johansson, Docent in Radiosystems,  
Department of Electrical and Information Technology
  - How to design and build a radio system that “works”.
  - Applications ranging from brain implants to particle accelerators ( $\mu\text{W}$  to  $\text{MW}$ ).

[www.medgadget.com](http://www.medgadget.com)

[www.essscandinavia.se](http://www.essscandinavia.se)

## Course outline

---

- Lectures/seminars
- One workshop
- One project
  - Two persons per group
- Final report, video and demo!

## Course schedule part I

3/9 *Tuesday* **Lecture** Course information and introduction to concepts.

6/9 *Friday* **Lecture** What is a computer? And what is electronics?

10/9 *Tuesday* **Laboration** LittleBits.

10/9 *Tuesday* **Seminar** Programming Playground Express.

**Register project groups.**

13/9 *Friday* **Cancelled**

17/9 *Tuesday* **Seminar** Interactive programming with Playground Express.

17/9 *Tuesday* **Seminar** Connecting external sensors.

**Project groups present their project name, ideas and propose a material list.**

20/9 *Friday* **Lecture** Arduino/other prototyping platforms

24/9 *Tuesday* **Lecture** Connecting motors and LEDs, and some parts on colour and movement.

## Course schedule part II

27/9 - 15/10 Project group meetings

18/10 Friday **Lecture** *Design for manufacturing*

26/10 Friday 24.00 **Deadline for the report.**

W44: **Presentation** of projects.

9/11 Friday **Deadline for components and movie.**

## Course requirements

---

- Needed to pass course:
  - Attend workshop
  - Attend and give project demo.
  - Project report (More details later, but necessary parts include: parts list, estimated cost, block and circuit diagram, photos of quick and dirty, functional, and final prototypes.
  - Project video (1 minute)
  
  - Hand back parts

## Course “literature”

[learn.adafruit.com/adafruit-circuit-playground-express/overview](https://learn.adafruit.com/adafruit-circuit-playground-express/overview)

---

- Circuit Playground Express
  - *Not* classic.
  - Ca. 280:- sek
- Programming cable (USB)
  - *Not* charging cable!

- [www.electrokit.com](http://www.electrokit.com)
- [www.lawicel-shop.se](http://www.lawicel-shop.se)
- [shop.pimoroni.com](http://shop.pimoroni.com) (UK based)

## Workshop

---

- LittleBits

## Electrical engineering basics

---

## Programming basics

---

```
152     document.getElementById( cell )
153 }
154
155 function updatePhotoDescription() {
156     if (descriptions.length > (page * 9) + (currentImage.substring(0, 1)))
157         document.getElementById( "imageDesc" ).innerHTML = descriptions[page * 9 + currentImage.substring(0, 1)];
158 }
159
160
161 function updateAllImages() {
162     var i = 1;
163     while (i < 10) {
164         var elementId = "foto" + i;
165         var elementIdBig = "bigimage" + i;
166         if (page * 9 + i - 1 < photos.length) {
167             document.getElementById( elementId ).src = "images/" + getImgPage() + i + ".jpg";
168             document.getElementById( elementIdBig ).src = "images/" + getImgPage() + i + ".big.jpg";
169         } else {
170             document.getElementById( elementId ).src = "";
171         }
172     }
173 }
```

## Electrical engineering basics

---

## Flashlight demo

---

- [www.tinkercad.com](http://www.tinkercad.com)

## “Laws”

- Kirchoffs current law
  - The sum of currents in a point is zero
- Kirchoffs voltage law
  - The sum of voltages in a loop is zero
- Ohms law
  - $U=R*I$  ([Volt]=[Ohm]\*[Ampere])
- Power law
  - $P=U*I$  ([Watt]=[Volt]\*[Ampere])

## Energy and power

- Energy is measured in Joules, J
- Power is measured in energy per second, J/s
- But batteries are measured in mAh (milli-ampere-hours)?

**Linocell Powerbank 7800 mAh**  
 Extrabatteri för mobil och USB-enheter

- Smidigt format
- Upp till 3 A
- USB-C och dubbla USB-A-portar

## The mystery of mAh as a unit.

U=5V  
7800 mAh  
=> 140 kJ

U=25V  
7000 mAh  
=> 630 kJ

### Linocell Powerbank 7800 mAh

mAh

Extrabatteri för mobil och USB-enheter

- Smidigt format
- Upp till 3 A
- USB-C och dubbla USB-A-portar

### Batteri typ Stiga 900

Ersättningsbatteri för robotgräsklippare

- Hög kapacitet (7000 mAh)
- Kompatibelt med många modeller

➤  $I \cdot V = P$  ( $[A] \cdot [V] = [W]$ )

➤  $P \cdot t = E$  ( $[W] \cdot [s] = [J/s] \cdot [s] = [J]$ )

## Tesla battery

Tesla Series 3

Battery capacity: 75 kWh

Battery voltage: 350V

Energy content : 94 500 MJ

Explosive comparison: 2.3 kg TNT

## Electronic basics

- We need closed circuits.
  - Current can only be controlled and directed, not lost.
- Voltage will be divided between serial loads.
- (Essentially) all power used will become heat.

## Programming basics

---

```
152     document.getElementById( 'descriptionCell' )
153 }
154
155 function updatePhotoDescription() {
156     if ( descriptions.length > ( page * 9 ) + ( currentIndex - 1 ) ) {
157         document.getElementById( 'imageDesc' ).innerHTML = descriptions[page * 9 + currentIndex - 1];
158     }
159 }
160
161 function updateAllImages() {
162     var i = 1;
163     while ( i < 10 ) {
164         var elementId = 'foto' + i;
165         var elementIdBig = 'bigimage' + i;
166         if ( page * 9 + i - 1 < photos.length ) {
167             document.getElementById( elementId ).src = 'images/' + photos[page * 9 + i - 1];
168             document.getElementById( elementIdBig ).src = 'images/' + photos[page * 9 + i - 1];
169         } else {
170             document.getElementById( elementId ).src = '';
171         }
172     }
173 }
```

## SARA

- Sequence
- Alternative
- Repetition
- Abstraction
- Analog programming

## PROGRAMMING – UNPLUGGED!

<p><b>SEQUENCE</b></p> <p>STAND SIT STAND WAVE "HEJ" "HEJ" "HEJ" TURN SIT</p>	<p>STAND SIT STAND WAVE <b>repeat (3)</b>   {"HEJ"} TURN SIT STAND <b>if BLACK SHOES</b> <b>then</b>   TURN <b>else</b>    JUMP SIT</p>	<p><b>ABSTRAKTION</b></p> <p><b>Def HELLO=</b> WAVE repeat (3)   {"HEJ"}  STAND SIT STAND HELLO TURN SIT</p>

## Prototype basics

---

3D systems

## Prototypes

---

- Different kind of prototypes
  - Quick and dirty
  - Functional (Proof of concept, Working)
  - Look and feel (Visual/Tactile)
  - Integrated (User experience/Functional)
  - Production

Where prototyping would have been good:

Hummer H1

## Interior space

## Quick and dirty

## Quick and Dirty

---

- The quick and dirty prototype
  - Facilitates communication
  - Gives a first idea of look and feel
  - Test/roleplay experience

## Illustrative “Idea”: Home Souse vide!

---

Idea in head:

## Quick-and-dirty prototype

---

## Functional electric prototype

---

(Not my kitchen, found the picture on the web....)

## Functional (electrical) prototype

---

- All electric components present
- Test functionality
  - Does motors, lights etc. turn on and off as intended?
  - Does displays give the right message?
  - Do the inputs and sensors work?

## Forgotten-kid-in-car-seat-alarm

<https://hackaday.com/2017/08/26/hackaday-prize-entry-fochica-alerts-you/>

## Next steps

---

In some order:

- Look and feel
  - Handmade
  - CAD/3D-printed mockup
  - Etc.
  - Possible to “fake” functionality
- Integrated prototype

Then:

- Production prototype
  
- Refinements...

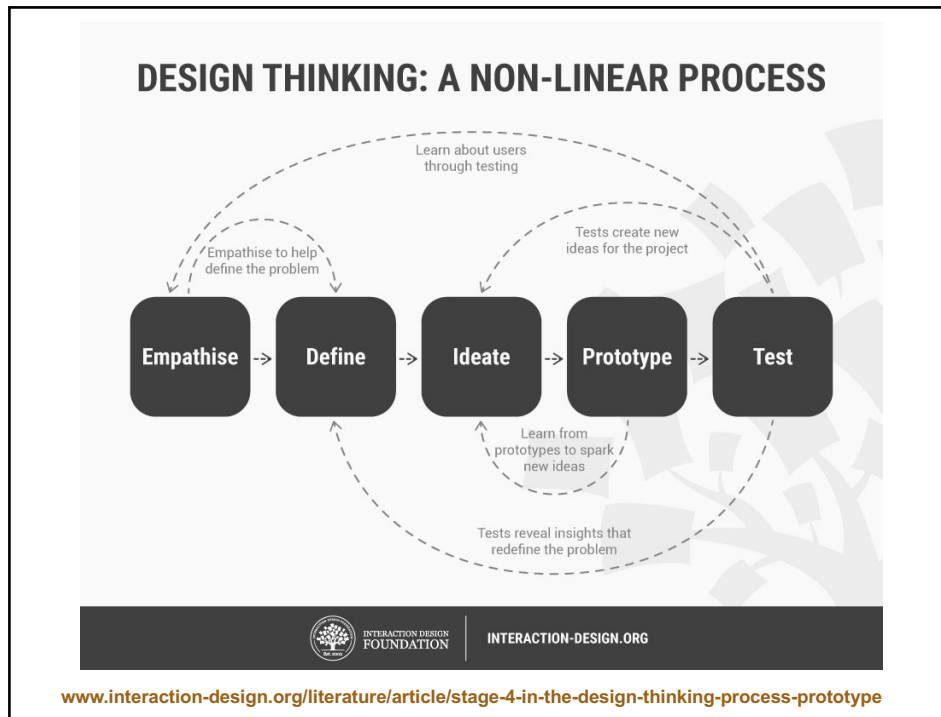

## Prototype/product generations

### Example: AxiDraw

---

**”THE FIRST ONE IS ALWAYS  
A PROTOTYPE”**

## Course “literature”

- Circuit Playground Express
  - *Not* classic.
  - Ca. 280:- sek
- Programming cable (USB)
  - *Not* charging cable!

- [www.electrokit.com](http://www.electrokit.com)
- [www.lawicel-shop.se](http://www.lawicel-shop.se)

## Why different types of cables?

- USB connection diagram.

Plug	Type	Receptacle
	A	
	B	
	Mini B	

Pin	Signal	Color	Description
1	VCC	■	+5V
2	D-	□	Data -
3	D+	■	Data +
4	GND	■	Ground

## First assignment:

---

- The project will be done in pairs, find a partner before Tuesday!
- Start thinking about ideas, but don't get stressed / locked in yet: the labs are intended to give inspiration!
