

How to export code pages from SDT?

The following instructions will show you how to print the code pages of the RRC layer to file. It is convenient to print out the code to a HTML file with PNG images for each page.

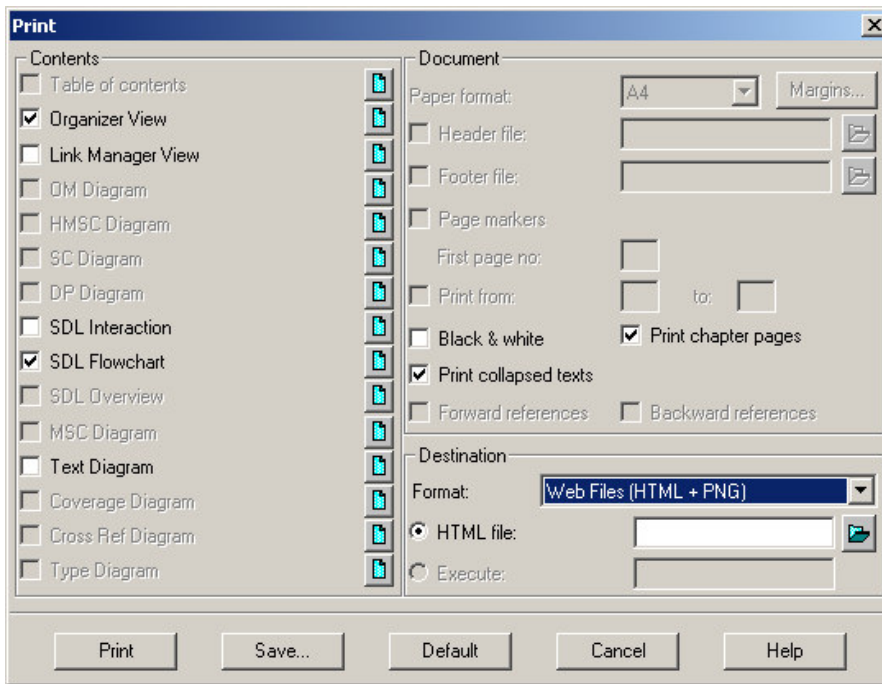

1. Select **RRCprocess** in the organizer window:

2. From the **File** menu Choose **Print ->Selected** :

3. In the **Print** dialog select **Format: Web Files (HTML+PNG)**, and in **HTML file** specify destination where the files have to be saved. It is good idea to create a folder for the print-out since the operation will result in many files.

4. Click **Print**. The files are now saved in the specified folder. Each code page will be saved as a PNG figure that can be used in your code deliverable.
5. Include only the code pages where you have made changes to the code deliverable.
