

Home assignment for grade 5 in ETSF05 and ETSF10, ht 2019

For students who have passed the quizzes with grade 4, and been accepted in the online discussions, there is an optional home task to obtain grade 5 on the course. This task is to read an article of your choice from a selection and to make a 7 minute presentation for other students. The task also includes active participation in the discussions of other students' presentations at a video conference.

Thus, the task is:

- Register your aim to try for grade 5 as soon as possible, but not later than Tuesday 7 January in a mail to bjorn.landfeldt@eit.lth.se. State name, ID and email address in the registration.
- Select one of the articles listed in moodle (address to a doodle will be mailed out on Monday 7)
- Read the article.
- Prepare a PowerPoint presentation and upload it to moodle not later than Sunday 19 January at 12.00 CET.
 - Use your own words in the presentation, i.e. no copy-paste
 - Specific pictures can be copied from the articles, but it is preferred to make your own.
- Questions that should be answered in your presentation are for example:
 - What is the problem the article discusses?
 - Why is this a problem?
 - What negative effects does it have?
 - What solution, or solutions, if any is suggested?
 - What is the expected outcome of applying the solution?
 - What assumptions are there in the paper, are they limiting, realistic?
- At a video conference do your presentation (7 minutes) and be prepared to answer questions from students and me.
- Actively discuss and comment on other's presentations at the video conference.

We will use zoom so make sure you have facilities for audio (preferably a headset) on your computer. The conference will be scheduled in study week one or two. Zoom is available through sUNET.zoom.us.
